"This sobering description of many computer-related failures throughout our world deflates the hype and hubris of the industry. Peter Neumann analyzes the failure modes, recommends sequences for prevention and ends his unique book with some broadening reflections on the future." —Ralph Nader, Consumer Advocate This book is much more than a collection of computer mishaps; it is a serious, technically oriented book written by one of the world's leading experts on computer risks. The book summarizes many real events involving computer technologies and the people who depend on those technologies, with widely ranging causes and effects. It considers problems attributable to hardware, software, people, and natural causes. Examples include disasters (such as the Black Hawk helicopter and Iranian Airbus shootdowns, the Exxon Valdez, and various transportation accidents); malicious hacker attacks; outages of telephone systems and computer networks; financial losses; and many other strange happenstances (squirrels downing power grids, and April Fool's Day pranks). Computer-Related Risks addresses problems involving reliability, safety, security, privacy, and human well-being. It includes analyses of why these cases happened and discussions of what might be done to avoid recurrences of similar events. It is readable by technologists as well as by people merely interested in the uses and limits of technology. It is must reading for anyone with even a remote involvement with computers and communications—which today means almost everyone. Computer-Related Risks: Presents comprehensive coverage of many different types of risks Provides an essential system-oriented perspective Shows how technology can affect your life—whether you like it or not!

Common sense tells you that you would know if you were evil, but what about the freaking anti-christ? Quite ironically, my name is Faith, and up until a few days ago I was just a normal waitress working a dead end job just to get by. My life was going perfectly crappy just like everyone else, and my dumb ass had to go and screw it up looking for love. When a mysterious dating app installs itself onto my phone I cave and take the bait. Little do I know the four blind dates I'm matched with are actually the four horsemen of the apocalypse, and my life is turned upside down like the crosses they wear around their necks. I barely have enough time to process that angels and demons exist because every angel and their momma is descending from a corrupt heaven to kill me. Backed into a corner I'm left with two choices- try to plead my innocence to God and his army, or become the anti-christ they all think I am and build my own. Are good and evil really as black and white as they're trying to make them out to be?

The text has been divided in two volumes: Volume I (Ch. 1-13) & Volume II (Ch. 14-22). In addition to the review material and some basic topics as discussed in the opening chapter, the main text in Volume I covers topics on infinite series, differential and integral calculus, matrices, vector calculus, ordinary differential equations, special functions and Laplace transforms. Volume II covers topics on complex analysis, Fourier analysis, partial differential equations and statistics. The present book has numerous distinguishing features over the already existing books on the same topic. The chapters have been planned to create interest among the readers to study and apply the mathematical tools. The subject has been presented in a very lucid and precise manner with a wide variety of examples and exercises, which would eventually help the reader for hassle free study.

In the 1720s and 1730s, Jean-Baptiste Oudry established himself as the preeminent painter in France of hunts, animals, still lifes, and landscapes. Oudry's Painted Menagerie focuses on a suite of eleven life-size portraits of exotic animals from the royal menagerie at Versailles, painted by Oudry between 1739 and 1752. These paintings eventually found their way into the ducal collection in Schwerin, Germany. Among them is the magnificent portrait of Clara, an Indian rhinoceros who became a celebrity in mid-eighteenth-century Europe. Her portrait has been out of public view for more than a century, and it is presented here in its newly conserved state.

Taher Dajani remembers playing soccer with his neighborhood friends in his idyllic city of Jaffa, Palestine. But on April 24, 1948, when Taher was fourteen, his carefree lifestyle came to an abrupt end. His family, with little money and few possessions, escaped the city by sea in a crowded fishing trawler as Zionist militia encircled Jaffa. Taher's father believed the family was in danger, so overnight they became refugees. The family took refuge in Syria and later in Libya, which enabled them to rebuild their lives. They experienced grief at leaving a place they loved and felt a great sense of loss and displacement, but with perseverance the Dajanis began anew. From Palestine to America describes the family's experiences and their determination. Taher Dajani writes this memoir about his new life after leaving his beloved Jaffa—from his days as a college student in Chicago to his work with the central bank in Libya—and his position with the International Monetary Fund in Washington DC. Even though it has been sixty years since the Dajani family were forced to flee Palestine, they remember their heritage and roots, and Jaffa, Palestine, will forever be in their hearts.

The definitive story of Honda's amazing supercar, the NSX

The Opium Wars of 1840-1860 were dark chapters of history. Britain went to war to force China to import thousands of tons of opium, to cripple and impoverish that nation. The Opium Wars never really ended. The U.S., like China, was too great for the London money lords to occupy by force. One way America is being brought to heel is by the drug trade. Crime and other social problems in the U.S. and Mexico are massively influenced by drugs and drug dealing. Illicit drugs may now account for as much as \$1 trillion annually in financing for criminal activity and corruption. TOPICS: The East India Company; British role in the drug trade, from the wars on China, the Hong Shanghai Bank, Bronfmans, Prohibition, and Organized Crime in the U.S. Financial derivatives; Wall St., money laundering; medical marijuana. decriminalization; Soros and IMF links to drugs. Afghan opium; Colombian cartel; terrorism. Russia targeted by Dope, Inc. cocaine, heroin, amphetamines. More than 30 years have passed since the first edition of Dope, Inc. was published, in 1978. Commissioned by Lyndon Larouche, it threatened the world's power structure. It became America's underground best-seller. Dope, Inc. drew the line between American patriots and the British apparatus destroying the USA. The London and Wall Street bankers ran for cover. A mammoth campaign of slander and government dirty tricks tried to bury the authors, because Dope, Inc. revealed the most deeply held secrets of the big names behind the world's illegal narcotics trade. In Venezuela, the leading drug-running families who were exposed in the Spanish-language version, Narcotrafico, S.A., used their political influence to have it banned and confiscated. Financiers scrambled to control the damage of this unprecedented exposure. The Hongkong and Shanghai Banking Corporation was denied a license in New York State because it failed to refute the charges in Dope, Inc. when the state demanded accounting of its hidden profits, silent subsidiaries, and paraphernalia of money-laundering. Now in 2010, Dope, Inc. is completely updated: Soros - Afghanistan - the government and bankers behind the cartels. Today the British-controlled dope trade finances the world's leading terrorist entities - Afghanistan's Taliban, the Chechen rebels, the FARC guerrillas of Colombia. Dope money supports the bankrupt world financial system. A trillion dollars goes through the Cayman Islands, the Isle of Man, Dubai. Speculation makes it trillions more. It sucks the blood of the real economy; and the dope destroys mankind's powers of reason.

Deanna Sclar (Long Beach, CA), an acclaimed auto repair expert and consumer advocate, has contributed to the Los Angeles Times and has been interviewed on the Today show, NBC Nightly News, and other television programs.

The main purpose of the Bill is to ensure that investigatory powers: interception of communications and acquisition of data, eg billing data; intrusive or covert surveillance; the use of covert human intelligence sources; and access to encrypted data, are used in accordance with human rights. For each of these powers, the Bill will ensure that the law clearly covers: the purposes for which they may be used; which authorities can use the powers; who should authorise each use of the power; the use that can be made of the material gained; independent judicial oversight; and a means of redress for the individual.

"Drawing on examples from nine countries across five continents, this book offers anyone interested in the future of higher education the opportunity to understand how communities become marginalised and how this impacts on their access to learning and their ability to thrive as students. Focusing on groups that suffer directly through discriminatory practices or indirectly through distinct forms of sociocultural disadvantage, this book brings to light communities about which little has been written and where research efforts are in their relative infancy. Each chapter documents the experiences of a group and provides insights that have a wider reach and gives voice to those that are often unheard. The book concludes with a new conceptualisation of the social forces that lead to marginalisation in higher education. This cutting-edge book is a must read for higher education researchers, policy makers, and students interested in access to education, sociology of education, development studies, and cultural studies"--
