*Reading Song Lyrics* Lars Eckstein 2010-01-01 *Reading Song Lyrics* offers the first systematic introduction to lyrics as a vibrant genre of (performed) literature. It takes lyrics seriously as a complex form of verbal art that has been unjustly neglected in literary, music, and, to a lesser degree, cultural studies, partly as it cuts squarely across institutional boundaries. The first part of this book accordingly introduces a thoroughly transdisciplinary interpretive framework. It outlines theoretical approaches to issues such as performance and performativity, generic convention and cultural capital, sound and songfulness, mediality and musical multimedia, and step by step applies them to the example of a

single song. The second part then offers three extended case studies which showcase the larger cultural and historical viability of this model. Probing into the relationship between lyrics and the ambivalent performance of national culture in Britain, it offers exemplary readings of a highly subversive 1597 ayre by John Dowland, of an 1811 broadside ballad about Sara Baartman, 'The Hottentot Venus', and of a 2000 song by 'jungle punk' collective Asian Dub Foundation. *Reading Song Lyrics* demonstrates how and why song lyrics matter as a paradigmatic art form in the culture of modernity.

**Media and Information Literacy Curriculum for Teachers: Curriculum and Competency Framework** UNESCO **iBroadway** Jessica Hillman-McCord 2017-11-21 This book argues that the digital revolution has fundamentally altered the way musicals are produced, followed, admired, marketed, reviewed, researched, taught, and even cast. In the first hundred years of its existence, commercial musical theatre functioned on one basic model.

However, with the advent of digital and network technologies, every musical theatre artist and professional has had to adjust to swift and unanticipated change. Due to the historically commercial nature of the musical theatre form, it offers a more potent test case to reveal the implications of this digital shift than other theatrical art forms. Rather than merely reflecting technological change, musical theatre scholarship and practice is at the forefront of the conversation about art in the digital age. This book is essential reading for musical theatre fans and scholars alike.

**Open Sources 2.0** Chris DiBona  
2005-10-21 Open Sources 2.0 is a collection of insightful and thought-provoking essays from today's technology leaders that continues painting the evolutionary picture that developed in the 1999 book Open Sources: Voices from the Revolution . These essays explore open source's impact on the software industry and reveal how open source concepts are infiltrating other areas of commerce and society. The essays appeal to a broad audience: the software developer will find thoughtful reflections on practices and methodology from leading open source developers like Jeremy Allison and Ben Laurie, while the business executive will find analyses of business strategies from the likes of Sleepycat co-

founder and CEO Michael Olson and Open Source Business Conference founder Matt Asay. From China, Europe, India, and Brazil we get essays that describe the developing world's efforts to join the technology forefront and use open source to take control of its high tech destiny. For anyone with a strong interest in technology trends, these essays are a must-read. The enduring significance of open source goes well beyond high technology, however. At the heart of the new paradigm is network-enabled distributed collaboration: the growing impact of this model on all forms of online collaboration is fundamentally challenging our modern notion of community. What does the future hold? Veteran open source commentators Tim O'Reilly and Doc Searls offer their perspectives, as do leading open source scholars Steven Weber and Sonali Shah. Andrew Hessel traces the migration of open source ideas from computer technology to biotechnology, and Wikipedia co-founder Larry Sanger and Slashdot co-founder Jeff Bates provide frontline views of functioning, flourishing online collaborative communities. The power of collaboration, enabled by the internet and open source software, is changing the world in ways we can only begin to imagine. Open Sources 2.0 further develops the evolutionary picture that emerged in the original Open Sources and expounds on the transformative open source philosophy. "This is a wonderful collection of thoughts and examples by great minds from the free software movement, and is a must have for anyone who follows free software development and project histories." --Robin Monks, Free Software Magazine The list of contributors include Alolita Sharma Andrew Hessel Ben Laurie Boon-Lock Yeo Bruno Souza Chris DiBona Danese Cooper Doc Searls Eugene Kim Gregorio Robles Ian Murdock Jeff Bates Jeremy Allison Jesus M. **Creating Data Literate Students** Kristin Fontichiaro 2017 Creating Data Literate Students provides high school librarians and educators with foundational domain knowledge to teach a new subset of information literacy skills -- data and statistical literacy, including: statistics and data comprehension; data as argument; and data visualization. Data -- both raw and displayed in visualizations -- can clarify or confuse, confirm or deny, persuade or deter. Students often learn that numbers are objective, though data in the real world is rarely so. In fact, visualized data -- even from authoritative sources -- can sometimes be anything but objective. Librarians and classroom educators need to be as fluent with quantitative data as they are with text in order to support high schoolers as they engage with data in formal and informal settings. We asked contributors to this volume -- experts in high school curriculum, information literacy and/or data literacy -- to

explore the intersections between data and curriculum and identify high-impact strategies for demystifying data for educators and students alike.

**The Geek's Chihuahua** Ian Bogost

check. In line at the coffee shop: check. In

The Geek's Chihuahua, Ian Bogost

addresses the modern love affair of "living with Apple" during the height of the company's market influence and technology dominance. The ubiquitous iPhone and its kin saturate our lives, changing everything from our communication to our posture. Bogost contrasts the values of Apple's

massive success in the twenty-first century with those of its rise in the twentieth. And he connects living with Apple with the

phenomenon of "hyperemployment"--the constant overwork of today's technological life that all of us now experience. Bogost

also reflects on the new potential function--as well as anxiety and anguish--of devices like the Apple Watch. We are tethered to our

devices, and, as Bogost says: that's just life--anxious, overworked, and utterly networked life. Forerunners: Ideas First is a

thought-in-process series of breakthrough digital publications. Written between fresh ideas and finished books, Forerunners draws

on scholarly work initiated in notable blogs, social media, conference plenaries, journal articles, and the synergy of academic exchange. This is gray literature publishing:

where intense thinking, change, and speculation take place in scholarship.

Remapping the keyboard's topography by way of Mozart and Super Mario, who head an expansive cast of historical and virtual actors, *Keys to Play* invites readers to unlock ludic dimensions of music that are at once old and new.
