### OBJ35Q - NATALEE MCMAHON

Jennie's favorite aunt is sending her a new hat, and Jennie is sure it will be beautiful. But when the box arrives, the hat inside is very plain. She had imagined a wonderful hat with big colorful flowers and even tries to make her own hat from a straw basket! Jennie is almost ready to give up on her dream when she receives a fanciful surprise from some very special friends. Ezra Jack Keats's timelessly charming illustrations will leave readers wishing for a dream hat of their own.

This volume explores the plurality of moral perspectives shaping bioethics. It is inspired by Kazumasa Hoshino's critical reflections on the differences in moral perspectives separating Japanese and American bioethics. It offers a rich perspective of the range of approaches to bioethics and brings into question whether there is unambiguously one ethics for bioethics to apply.

This book provides descriptions and illustrations of cutting-edge text analysis methods for communication and marketing research; cultural, historical-comparative, and event analysis; curriculum evaluation; psychological diagnosis; language development research; and for any research in which statistical inferences are drawn from samples of texts. Although the book is accessible to readers having no experience with content analysis, the text analysis expert will find substantial new material in its pages. In particular, this collection describes developments in semantic and network text analysis methodologies that heretofore have been accessible only among a smattering of methodology journals. The book's international and cross-disciplinary content illustrates the breadth of quantitative text analysis applications. These applications demonstrate the methods' utility for international research, as well as for practitioners from the fields of sociology, political science, journalism/communication, computer science, marketing, education, and English. This is an "ecumenical" collection that contains applications not only of the most recent semantic and network text analysis methods, but also of the more traditional thematic method of text analysis. In fact, it is originally with this volume that these two "relational" approaches to text analysis are defined and contrasted with more traditional "thematic" text analysis methods. The emphasis here is on application. The book's chapters provide guidance regarding the sorts of inferences that each method affords, and up-to-date descriptions of the human and technological resources required to apply the methods. Its purpose is as a resource for making quantitative text analysis methods more accessible to social science researchers.

This 240-page book is the complete, authoritative guide to the history, techniques, and patterns of crochet -- and now it's been updated to reflect what's popular in crochet today. Expanded information is given in some areas, and the skill-building projects have been refreshed with up-to-the-minute patterns. Materials and basic techniques are clearly illustrated. Twenty-nine unique projects are stunningly photographed and meticulously charted for symbol crochet, with thorough written instructions to guide even a novice. For those whose skills go beyond the basics, advanced techniques and projects will challenge and inspire. The pattern gallery explains how to read patterns and features 164 charts for traditional as well as brand new crochet patterns. A resource list, cross-referenced index, and bibliography round out the volume.

The Reuben Atkinson Story covers little-known Texas history, the trials and tribulations of Mexican-Americans during the periods of political turmoil in 1836 and again in the early 1900s. It covers events that show us how Mexican-Americans survived these hardships. The section about life on the ranch and life on the farm reveals the intuitive ways in which the Mexican-American culture used to enjoy the good times and survive the difficult times. The military career section provides an overview of the author's life in the United States Air Force in the late 1950s and after. The author also shares his ideas for improving our educational system on a nationwide basis. The forms and recommendations for students and parents to use when applying to college and requesting scholarships may be of great value to them. The author has also included a selection of traditional Mexican recipes, wild game recipes and some delicious but weird Mexican recipes which will be of great interest to readers!

Metaphysics and Hermeneutics in the Medieval Platonic Tradition consists of twelve essays originally published between 2006 and 2015, dealing with main trends and specific figures within the medieval Platonic tradition. Three essays provide general surveys of the transmission of late ancient thought to the Middle Ages with emphasis on the ancient authors, the themes, and their medieval readers, respectively. The remaining essays deal especially with certain major figures in the Platonic tradition, including pseudo-Dionysius the Areopagite, Iohannes Scottus Eriugena, and Nicholas of Cusa. The principal conceptual aim of the collection is to establish the primacy of hermeneutics within the philosophical program developed by these authors: in other words, to argue that their philosophical activity, substantially albeit not exclusively, consists of the reading and evaluation of authoritative texts. The essays also argue that the role of hermeneutics varies in the course of the tradition between being a means towards the development of metaphysical theory and being an integral component of metaphysics itself. In addition, such changes in the status and application of hermeneutics to metaphysics are shown to be accompanied by a shift from emphasizing the connection between logic and philosophy to emphasizing that between rhetoric and philosophy. The collection of essays fills in a lacuna in the history of philosophy in general between the fifth and the fifteenth centuries. It also initiates a dialogue between the metaphysical hermeneutics of medieval Platonism and certain modern theories of hermeneutics, structuralism, and deconstruction. The book will be of special interest to students of the classical tradition in western thought, and more generally to students of medieval philosophy, theology, history, and literature.

Using a feminist political economy approach, contributors document the impact of current socio-economic policies on states, markets, households, and communities. Relying on impressive empirical research, they argue that women bear the costs of and responsibility for care-giving and show that the theoretical framework provided by feminist analyses of social reproduction not only corrects the gender-blindness of most economic theories but suggests an alternative that places care-giving at its centre. In this illuminating study, they challenge feminist scholars to re-engage with materialism and political economy to engage with feminism.

WINNER OF THE LINCOLN FORUM BOOK PRIZE "A Lincoln classic...superb." —The Washington Post "A book for our time." —Doris Kearns Goodwin Lincoln on the Verge tells the dramatic story of America's greatest president discovering his own strength to save the Republic. As a divided nation plunges into the deepest crisis in its history, Abraham Lincoln boards a train for Washington and his inauguration—an inauguration Southerners have vowed to prevent. Lincoln on the Verge charts these pivotal thirteen days of travel, as Lincoln discovers his power, speaks directly to the public, and sees his country up close. Drawing on new research, this riveting account reveals the president-elect as a work in progress, showing him on the verge of greatness, as he foils an assassination attempt, forges an unbreakable bond with the American people, and overcomes formidable obstacles in order to take his oath of office.

This exam preparation and revision text for the First Certificate exam employs a two-page format - the left-hand pages provide FCE practice and the right-hand pages organize the language just covered. This edition has been published to accompany the revised First Certificate Examination.

Manual focusing on documenting the occupational therapy process. Each skill is broken down into small steps and taught individually. Includes a template for writing problems, goals, and each section of the SOAP note. Also includes practice worksheets and detachable checklist and summary.

Learn the secrets to transforming an ordinary piece of wood into a striking work of art with the easy-to-follow instructions in this book. Inside you'll find 3 step-by-step projects for carving realistic and caricature bears with a chainsaw. Covers pattern design, layout, and basic chainsaw cuts.

This book illustrates how MAPLE can be used to supplement a standard, elementary text in ordinary and partial differential equation. MAPLE is used with several purposes in mind. The authors are firm believers in the teaching of mathematics as an experimental science where the student does numerous calculations and then synthesizes these experiments into a general theory. Projects based on the concept of writing generic programs test a

student's understanding of the theoretical material of the course. A student who can solve a general problem certainly can solve a specialized problem. The authors show MAPLE has a built-in program for doing these problems. While it is important for the student to learn MAPLE's in built programs, using these alone removes the student from the conceptual nature of differential equations. The goal of the book is to teach the students enough about the computer algebra system MAPLE so that it can be used in an investigative way. The investigative materials which are present in the book are done in desk calculator mode DCM, that is the calculations are in the order command line followed by output line. Frequently, this approach eventually leads to a program or procedure in MAPLE designated by proc and completed by end proc. This book was developed through ten years of instruction in the differential equations course. Table of Contents 1. Introduction to the Maple DEtools 2. First-order Differential Equations 3. Numerical Methods for First Order Equations 4. The Theory of Second Order Differential Equations with Con- 5. Applications of Second Order Linear Equations 6. Dr. Gilbert was professor at Indiana University, Bloomington and later became the Unidel Foundation Chair of Mathematics at the University of Delaware. He has published over 300 articles in professional journals and conference proceedings. He is the Founding Editor of two mathematics journals Complex Variables and Applicable Analysis. He is a three-time Awardee of the Humboldt-Preis, and received a British Research Council award to do research at Oxford University. He is also the recipient of a Doctor Honoris Causa from the I. Vekua Institute of Applied Mathematics at Tbilisi State University. George C. Hsiao holds a doctorate degree in Mathematics from Carnegie Mellon University. Dr. Hsiao is the Carl J. Rees Professor of Mathematics Emeritus at the University of Delaware from which he retired after 43 years on the faculty of the Department of Mathematical Sciences. Dr. Hsiao was also the recipient of the Francis Alison Faculty Award, the University of Delaware's most prestigious faculty honor, which was bestowed on him in recognition of his scholarship, professional achievement and dedication. His primary research interests are integral equations and partial differential equations with their applications in mathematical physics and continuum mechanics. He is the author or co-author of more than 200 publications in books and journals. Dr. Hsiao is world-renowned for his expertise in Boundary Element Method and has given invited lectures all over the world. Robert J. Using Lady Morgan's *The Wild Irish Girl* as his point of departure, Thomas J. Tracy argues that nineteenth-century debates over what constitutes British national identity often revolved around representations of Irishness, especially Irish womanhood. He maps the genealogy of this development in fiction, political discourse, and the popular press, from Edgeworth's *Castle Rackrent* through Trollope's Irish novels, focusing on the pivotal period from 1806 through the 1870s.

" Whether called "the good people," "the little people," or simply

"them," fairies are familiar from their appearances in Shakespeare's plays, Disney's films, and points in between. In many cul-

tures, however, fairies are not just the stuff of distant legend or literature: they are real creatures with supernatural powers. The Good People presents nineteen essays that focus on the actual

fairies of folklore -- fairies of past and living traditions who affected, and still affect, people's lives in myriad ways.
